

Quick Keyboard shortcuts

dbDOS™ 1.0 supports a number of different keyboard shortcuts that users can use to make the experience with dbDOS™ even better. All the standard keyboard commands of MS-DOS are supported, plus some additional ones listed below:

Toggle FULL-SCREEN

- **Alt-Enter** – This will take the user from Full-Screen to Windows screen. If user is in a windowed setting pressing the **Alt-Enter** will take the product full-screen. Hitting the **Alt-Enter** again will put the user back in to a windowed setting.

***Toggling to and from full-screen mode may not always work with different graphics cards and the dbDOS™ window may become unstable.*

Toggle Mouse Focus

- **CTRL-F10** – This will enable or release the mouse. If you have mouse control for the dbDOS window and the user would want to escape back to the Windows OS, press the **CTRL-F10** and the mouse control will be released from the dbDOS™ window. While on a dbDOS™ window, if **CTRL-F10** is pressed the mouse will be activated inside that window.

Kill dbDOS™ session

- **CTRL-F9** – This will KILL the dbDOS™ windows or session. If for some reason the user needs to exit or kill the running program pressing the CTRL-F9 key combination, will close the dbDOS™ window and thus will kill the dbDOS™ session as well.

***Please be aware the closing a window with CTRL-F9 could cause corruption as the window/session is automatically killed with no regard to open or mid-process files, use with caution.*
